

Vision Document- "Find My Place"

- **Project Purpose:** Live monitoring of people density in places
- **Target Market:** All places in which knowing the amount of people there in advance might affect your decision to go there
- **Permissions:** Owner (editing the settings of a place) , Client (viewing the details about a place)
- **Description:** Measuring the density of people in a given place by analyzing Wi-Fi and Bluetooth signals around a raspberry Pi device, and updating the application live, letting customers know in advance if the place is crowded or not.
- **Risks:**
Possible risks to the success of implementation include, but are not limited to:
 - * Non-user-friendly system
 - * New requirements added; end-users insist on new requirements
 - * Translating wrong the number of signals to the number of people
